

E-RUNNER

E-Runner

The E-RUNNER is a versatile all-round electric logistics scooter or tug that can be used for a large number of logistics purposes because it can tow loads up to 1500 kg. This tug can easily travel 35 km per day or two shifts without recharging. The E-RUNNER can be used as a logistics electric scooter, for order picking or bridging large distances in logistics DC 's or production environments. Its short turning circle (360 degrees) makes it suitable for turning even in the narrowest aisles or elevators. You activate the E-RUNNER with a digital key. The speed is set to a maximum of 6 km/h by default, but can be adjusted to a maximum of 10-12 km/h on request.

ERGONOMICS

User comfort was central to the design of the E-RUNNER. The ease of use, the extremely short turning circle and perfect driving characteristics compared to conventional electric tugs, make the E-RUNNER very effective and versatile.

The E-RUNNER stimulates an active working posture, reduces fatigue and therefore helps to eliminate human errors in the working environment.

SPECIFICATIONS

Batteries	AGM 24V batteries maintenance free
Charger	External IP67 shockproof up to 8 hours of recharging time
Ground clearance	39 mm
Towing capacity	1500 kg
Length	815 mm
Width	670 mm
Overall height	1350 mm
Platform height	140 mm
Max. speed	6 km/h (up to 10-12 km/h per request)
Operation	Forward and reverse throttle with soft start
Tow hitch	20mm diameter steel pin or tailored per request
Safety	Emergency stop button Electronic key
Brakes	2 electronic brakes
Horn	30 or 115 dB (optional)
CE	Included
